Flight Plan: Run Sheet

ISA 401, Class 23, Wed Nov 11, 2026 (A 8:30, B 10:05). During design, never say whether a KPI matters and never comment on a design.

Students https://isa401-flight-plan.vercel.app/?section=A and `?section=B` (QR codes on the game slide)
Projector https://isa401-flight-plan.vercel.app/host?section=A: runs everything; Space = next step
Phone https://isa401-flight-plan.vercel.app/snap?section=A: only takes the board photo **Key:** the Game Day word **Test:** `?section=Z`

1. Before class

- ☐ Draw the X at chest height; mark the 6 ft throw line.
- ☐ **X width:** tape it from the left end of the strokes to the right end (diagram). Draw it **12 in wide** and you type nothing; otherwise enter it in Settings → X width (in).
- ☐ Markers: black, blue, red, green, purple. Tape measure. A sheet of paper in your pocket.
- ☐ Projector: open, enter the key, Reset twice. Music: pick the four Rocky files on `M:`.
- ☐ Phone: open the snap page, enter the key.
- ☐ **Before B:** erase the marks (keep the X); switch projector and phone to B; Reset twice.

orange: drag onto the two top ends
red: drag onto the crossing

On the check screen, the handles sit on the same two ends you taped. That distance sets inches per pixel.

2. Phase by phase

Phase	min	What you click	Say / watch
Slides + Lobby	4	Deck: KPI slide, game slide. Projector: Lobby	Teams = seating rows.
Design	17	Design: clock + music start; + 1 min / − 1 min	Tiles show counts only. Stay silent on relevance.
Vote	7	Read each team's accuracy definition; Lock the rule (tie: Override menus)	One vote per student. A miss is never 0 (0 = dead center).
Throws	12	Next team; tap a throw for missed board; Change sets a team's marker	3 throws per team from 6 ft. No two teams can share a marker.
Check	2	Phone: First photo, Take photo. Projector: Pre-fill with AI, fix marks, Save marks	Each team "3 of 3". AI down: click the marks yourself.
Reveal	4	Reveal; Show the measurement	Winner's brief; "would the winner change?"
Instructor	4	No team made a ball: Instructor, Start my throws, 3 throws, phone Second photo, marks, Score my throws. Teams did: tick each one, These teams did it	Win: mic-drop GIF + Final Bell. Lose: music cuts, airball GIF.
KPIs	8	KPIs	Each team's KPIs by bucket, next to the ball.
After-game deck	6	Open `23b_after_the_game.html`, then back to the main deck	Baggage claim, ethics cases, jobs.

About 64 min, so the report slides get about 16. Behind? − 1 min on Design, or shorten KPIs.

3. The metrics table

Product (client)	Relevance	Ball	Operational	Relevance	Ball
Accuracy: distance to the X	tied to the goal	best	Cycle time (build one plane)	process	~5 s
Consistency / spread	tied to the goal	tight	Takt time (available time / planes needed)	process	met
Hit rate within N in	tied to the goal		Lead time (design start to ready)	process	~5 s
Reaches the board	tied to the goal	every throw	People involved	process	1
Durability	supports the goal	unlimited	Cost of resources (incl. scrapped)	process	1 sheet
Skill needed to throw	supports the goal	none	Prototypes / iterations	process	0
Unit cost (final plane)	client might value	1 sheet	Training time	process	none
Aesthetics	client might value	**loses**	*No match: you discuss.* Cost is in both lists.		
Speed, flight time, distance	not tied	**loses**			
Weight	not tied				

4. If students complain

Tape the throw and type the inches in its Tape (in) box on the Reveal screen. The board shows both numbers and re-ranks with a note. The Ruler (click two points on the photo) checks the photo in front of them.

5. After class

- ☐ After section B ends: Publish recap in A and in B.
- ☐ Settings → Export CSV for the 0.15 bonus (the winning team gets it either way).
- ☐ Remove the Class 23 lines from `.gitignore`; push the decks. Reset Z.
